V7 is committed to product safety

Underwriters Laboratories (UL) is a Nationally Recognized Testing Laboratory (NRTL) recognized by the Occupational Safety and Health Administration (OSHA). When a product has been UL Listed, a representative sample has been tested by UL and found to meet all relevant UL-published Standards for Safety including electrical, fire resistance, protection, and durability. We put our products through this certification process to safeguard against these potential hazards.

The UL certification is an optional certification developed by UL, a global safety certification company. UL certified products go through strict tests by certified labs to verify the safety of the products.

The established safety standards for ICT equipment (60950-1) and AV equipment (60065) are phased out in favor of a single standard UL 62368-1. The new standard introduces a new hazards-based approach of product testing including the safety of components and use of the product and is more stringent than to ensure safer operating conditions.

V7 CHGCT36i-1N Charge Carts is the first to comply to the latest UL 62368-1 standards. Our carts have been tested and certified to ensure the proper grounding, wiring protection, hazard/fire safety, design stability, and general safety to give you piece of mind.

V7 Charge Carts

- UL/cUL listed IEC 62368-1 (UL 62368-1 and CSA 62368-1)
- Tested and Verified to comply with strict safety and usage standards
- Quality components, packaging, and products
